

Pursuant to Md. Code Ann., Health Occ. § 12-508(a)(3) and COMAR 10.34.32.03B-2, a licensed pharmacist registered with the Board may administer a vaccination listed on the Center for Disease Control and Prevention's ("CDC") Recommended Immunization Schedule to an adult without a prescription, subject to certain requirements. On September 22, 2023, the CDC released an addendum to the Schedule adding the RSV vaccine for pregnant people during weeks 32 to 36 of gestation and adults 60 years of age and older, as recommended by ACIP and adopted by the CDC. As such, a licensed pharmacist's vaccination administration authority for adults currently includes the RSV vaccine administered to a pregnant person during weeks 32 to 36 of gestation or to an adult 60 years of age or older.
